

**E-PORT 18650 NON RF
 AND E-PORT 18650 RF**

The E-Port 18650 Non RF controller is portable and can be moved around to operate more than one roller shutter (our recommendation is up to 3 shutters), highlighting the overall cost effectiveness of the system.

The E-Port 18650 RF control is not portable, and each shutter will need its own control which is then programmed to either a 1 or 9 channel E-Trans RF Remote.

E-Trans 1 Ch Remote = 15.560.001
 E-Trans 9 Ch Remote = 15.561.001

The Non RF and RF E -Port 18650 controls have re-chargeable Li- Ion batteries with a large 1,600mAh battery capacity providing increased cycles before charging is required and increasing the overall battery life expectancy. They also consist of the control circuits, operational switches and LED indicators showing the operational characteristics.

The E-Port controller works in conjunction with the E-Port Wall Plate to allow for the power to be generated from the battery through to the motor.

The E-Port 18650 Non RF and RF Controls are charged with the E- Charger (15.580.003).

E-Port RF with E-Trans Remote

**E-PORT 18650 TECHNICAL
 SPECIFICATIONS**

E-Port (18650) 15.600.001
 E-Port (18650) 15.601.001

OUTPUT	14.8. Volts 1600mAh Li-Ion
SIZE	H 114mm W 81mm D 33mm
WEIGHT	295g
